FINDING VALUES ON METER STRIPS

Identify unknown numbers on a number line diagram by using the distance between numbers and reference points.

Find the value of the point marked by a letter on each number line. One unit is the distance from one hash mark to the next.

Example:

Each unit has a length of 5 centimeters.

$$A = \underline{40} \text{ centimeters.}$$

Each unit has a length of 10 centimeters.

$$B = \underline{\quad} \text{ centimeters.}$$

Each unit on the meter strip has a length of 5 centimeters.

$$C = \underline{\quad} \text{ centimeters.}$$

3) Each hash mark represents 5 more on the number line.

$$D = 75.$$

What is the difference between the two end points _____.
