

NAME _____ DATE _____

ADDITION OR SUBTRACTION

Choose the strategy to solve and explain why you choose that strategy.

Example:

$$600 - 437 = \underline{163}$$

$$600 \xrightarrow{-100} \underline{500} \xrightarrow{-100} 400 \xrightarrow{-100} \underline{300} \xrightarrow{-100} 200 \xrightarrow{-10} \underline{190} \xrightarrow{-10} 180 \xrightarrow{-10} \underline{170}$$

$$\xrightarrow{-7} 163$$

Explanation:

I choose the above 'arrow way' strategy because.

- It is very easy to understand.
- Subtraction of multiples of 100's and 10's are very easy.
- One need not think deeply.
- It is very simple and saves the time.

1) $808 - 597 = \underline{\quad}$

$$808 \xrightarrow{-100} \underline{\quad} \xrightarrow{-100} \underline{\quad} \xrightarrow{-100} \underline{\quad} \xrightarrow{-100} \underline{\quad} \xrightarrow{-100} \underline{\quad} \xrightarrow{-100} \underline{\quad} \xrightarrow{+3} \underline{\quad}$$

Explanation:

I choose the above 'arrow way' strategy because.

- In this strategy there is no much difficult to think deeply.
- 97 is near to 100.
- If we subtract 100 and add +3 the process is exactly correct.
- It is also simple and saves the time.
