## COUNTING MONEY WITHOUT USING COINS

Solve word problems involving the total value of a group of bills.

1) On Saturday, Mary Jo received 5 ten dollar bills, 4 five dollar bills and 17 one dollar bills. On Sunday, she received 4 ten dollar bills, 5 five dollar bills and 15 one dollar bills. How much more money did Mary Jo received on Saturday than on Sunday?
Solution: Mary Jo received on Saturday:
Ten dollar bills (5) = $\qquad$ $+$ $\qquad$ $+$ $\qquad$ $+$ $\qquad$ $+$ $\qquad$ = $\qquad$ dollars.
Five dollar bills (4) $=\ldots_{+}^{+}+{ }_{+}+{ }_{C}=\ldots$ dollars. One dollar bills (17) = $\qquad$ dollars.

$$
\text { Total }=\ldots_{1}^{+}+{ }_{C}^{+}=\ldots \text { dollars } .
$$

Mary Jo received on Sunday:
Ten dollar bills (4) = $\qquad$ $+$ $\qquad$ $+\quad=$ $\qquad$ dollars.
Five dollar bills $(5)=$ $\qquad$ $+$ $\qquad$ $+$ $\qquad$ $+$ $\qquad$ = $\qquad$ dollars. One dollar bills (15) = $\qquad$ dollars.

$$
\text { Total }=\__{C}^{+}+\__{1}=\ldots \text { dollars } .
$$

Mary Jo received on Saturday than on Sunday = $\qquad$ - $\qquad$ $=$ $\qquad$ dollars.
2) Kate had 2 ten dollar bills, 6 five dollar bills and 21 one dollar bills before she spent $\$ 45$ on a new outfit. How much money was not spent?
Solution: Money has with Kate:
Ten dollar bills (2) = $\qquad$ $+$ $\qquad$ $=$ $\qquad$ dollars.
 One dollar bills $(21)=\ldots$ dollars.

$$
\text { Total }=\__{C}^{+}+{ }_{C}^{+}=\ldots \text { dollars } .
$$

She spent money on a new outfit $=$ $\qquad$ dollars.
Money was not spent by Kate $=$ $\qquad$ - $\qquad$ = $\qquad$ dollars.
By using number bond:

$50-45=$ $\qquad$ .
$21+5=$ $\qquad$
