## COUNTING THE OBJECTS

Counting objects by observing rows and columns.
Example:
Use the array of triangles to answer the questions below.
a) $\underline{3}$ rows of $\underline{4}=12$.

b) $\underline{4}$ columns of $\underline{3}=12$.

c) $\underline{4}+\underline{4}+\underline{4}=\underline{12}$.

d) Add 1 more row. How many triangles are there now? 16 .

1) Use the array of squares to answer the questions below?
a) $\qquad$ .
b) $\qquad$ rows of __ = $\qquad$ .
c) $\qquad$ columns of $\qquad$ $=$ $\qquad$ .
d) Remove 1 row. How many squares are there now? $\qquad$ .
e) Remove 1 column the new array you made in 3(d). How many squares are there now? $\qquad$ .
